## Data Flow Diagram (DFD)

A **Data Flow Diagram (DFD)** shows how data moves through the system and how different components interact with each other.

### Level 0 - Context Diagram

This is the **high-level view** of the system.

#### External Entities

- Customer / User
- Support Agent
- Admin

#### Process

Ticket Management System

#### Data Flow

- Customer submits a **support ticket** to the system.
- System stores ticket information in the **database**.
- System automatically assigns the ticket to a **support agent**.
- Support agent updates ticket status after resolving the issue.
- Customer receives **status updates and solutions**.

## Level 1 - Detailed DFD

### Processes

- Ticket Creation
- Ticket Assignment
- Ticket Processing
- Ticket Resolution & Update

### Data Stores

- Ticket Database
- Agent Database

## 2 User Stories

User stories describe **what users need from the system** and help developers understand system requirements.

### User Story 1 - Customer

**As a customer**, I want to create a support ticket so that I can report my issue and get help from the support team.

### User Story 2 - Customer

**As a customer**, I want to check the status of my ticket so that I know whether my issue is being resolved.

### User Story 3 - Support Agent

**As a support agent**, I want to receive tickets based on my expertise so that I can resolve issues efficiently.

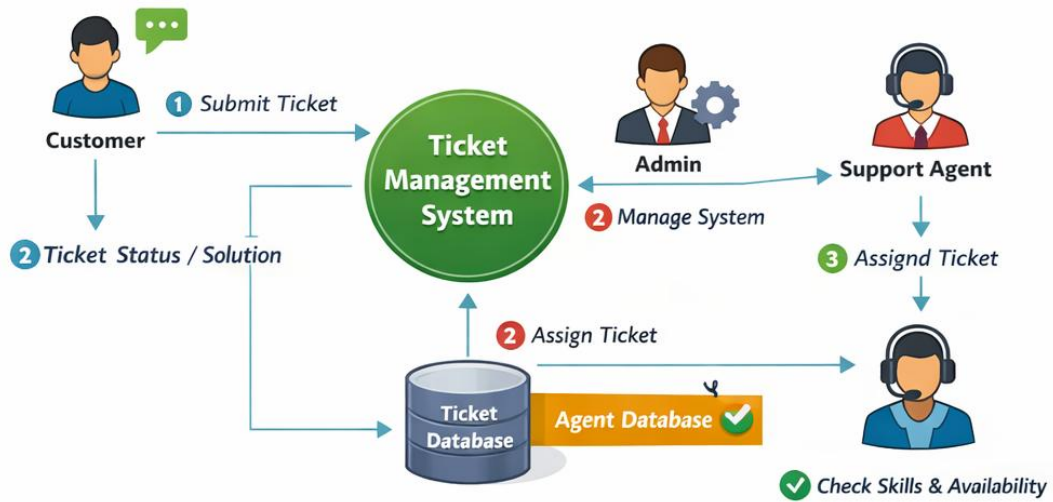

### User Story 4 - Support Agent

**As a support agent**, I want to update the ticket status after solving the problem so that customers are informed about the solution.

### User Story 5 - Admin

**As an administrator**, I want to monitor all tickets and agent workloads so that I can manage support operations effectively.
