Access Control Rules allow access to the specified resource if all three of these checks evaluate to true:
1. The user has one of the roles specified in the **Role** list, or the list is empty.
2. Conditions in the **Condition** field evaluate to true, or conditions are empty.
3. The script in the **Script** field (advanced) evaluates to true, or sets the variable "answer" to true, or is empty.
The three checks are evaluated independently in the order displayed above.
